Health Care Promotion with Predictive Intelligence

Prof. Thomas Choi

Professor, School of Nursing, Hong Kong Polytechnic University, HKSAR

Artificial intelligence (AI) is a key enabling technology of smart living. In this talk, the potential of AI in the realm of healthcare is presented. Leveraging healthcare data, intelligent predictive models can be built with AI technologies to derive knowledge to support decision making. It has shown to be feasible for early detection of health problems and prediction of prognosis or mortality. In addition to medical and clinical applications, the data-driven AI approach also holds promising potential for smart healthcare in the community.
